EDUCATION

Western Governors University
Bachelor of Science in Software Engineering

New York, NY
May 2027

EXPERIENCE

Software Engineer

Jan 2025 – Present

Johnstone Supply

Cranford, NJ

- Engineered an Electron-based desktop application utilizing JavaScript and Node.js to centralize PowerShell script distribution, enabling IT self-service capabilities and reducing support ticket volume by 20% through automated end-user troubleshooting.
- Architected and implemented automated device provisioning workflows using PowerShell and Microsoft Intune APIs, eliminating 40% of manual hardware setup processes through programmatic enrollment and configuration management.
- Built a self-contained WPF desktop application in C# leveraging Microsoft Graph API and OAuth authentication to programmatically query Intune for LAPS credentials, implementing async API operations and response caching to accelerate administrative password retrieval by 35%.

Advanced Repair Agent

Jan 2023 – Dec 2024

Geek Squad

New York, NY

- Reduced the amount of repeat customers by 20% by thoroughly troubleshooting and quality assuring user devices.
- Increased the amount of PC sales by 33% by bundling the sale of the parts and labor of the build.
- Increased Geek Squad team efficiency by 40% through optimizing part selection and streamlining the PC build process.

PROJECTS

Gavlans Game | *Node.js, MongoDB, Express.js, React, Material-UI*

<https://gavlansgame.com/>

- Created my own REST API with Express.js and Mongoose being hosted on Firebase to GET and POST data to and from the frontend.
- The frontend is using React and Material-UI, also being hosted on Firebase.
- High speed trivia game using a MERN stack, focused on speed over accuracy.
- Using the MongoDB database to store all questions, choices and answer data.

Hashashin Discord Bot | *Javascript, MongoDB, AWS, APIs*

<https://github.com/Nyqvist/Hashashin>

- Created and developed a public open source Discord Bot with a Discord API Javascript Wrapper.
- The Bot is being hosted on AWS and uses the Steam API to obtain information about games and post it for the user.
- MongoDB is being used to store data for certain commands, such as Runescape item lookups, and Discord quizzes.
- The bot is used in several servers by at least 40+ users.

Electron Self-Help App | *Electron, HTML, JavaScript, CSS*

<https://github.com/Nyqvist/Electron-SS>

- Developed a desktop app using Electron that is pushed to all users for self help.
- The desktop app comes pre-loaded with one click powershell scripts for common issues.
- Application helped reduce the amount of duplicate tickets by 20%.
- The application also uses HTML and CSS for formatting and UI.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (Postgres), JavaScript, HTML/CSS, C#

Frameworks: React, Node.js, Material-UI, FastAPI, AWS, Angular, Swift

Developer Tools: Git, Docker, TravisCI, Google Cloud Platform, VS Code, Visual Studio, PyCharm, IntelliJ, Eclipse

Concepts: Data Structures and Algorithms, Databases, REST API, Frontend, Backend, Cloud Computing
